

COMP4300
Maxim Abdulkhalikov
Assignment instructions:

1. Open command line/power shell (at least 2 windows)
2. Use command line and write “python3 server.py” for a server launch. Server will launch on host 127.0.0.1 and port of 4073
3. Use another command line to write “python3 client.py NICKNAME ROOMNAME”. NICKNAME is your nickname. ROOMNAME is a name of a room that you want to connect to. If room with ROOMNAME does not exist, it will create a room with that name.
4. You can connect any number of clients to a server using separate command lines.
5. Commands available are shown on launch of a client. Commands include <room> <roomlist> <commands> <join ROOMNAME>

=====

You can connect as many users to a server as you would like. There is a max capacity of 5 users per room. When users join another room, he is automatically leaving the previous room.
